

Lake Rescue Chalet in Ludlow, Vermont

Hot Tub Instructions

Your Bengal Hot Tub features a special ionizing filter that keeps the water clean with a minimum amount of chlorine. It's easier on your skin and smells better, too. But you need to keep it clean and ready for your next soak!

AFTER EACH USE:

- Put in one 1 1/3 tablespoon of Enhanced Shock (Orange Cap). Let jets run for 1 minute.
- If water is still hazy, turn jets on and put 1 1/3 tablespoons of Chlorine (Blue Cap) into tub. Let jets run 1 minute.
- If you use the hot tub heavily or water is still hazy, use a test strip to check the pH balance, and apply chemicals as indicated on the test strip container.

WHEN YOU LEAVE

- Put in 1 1/3 tablespoons of chlorine to keep the water clean for the next group.

***ALL CHEMICALS SHOULD BE Poured INTO THE FILTER AREA
OF THE TUB WITH THE JETS ON.***

For Your Safety

- Please do not use the hot tub if you have an open wound or scrape since you risk infecting other people or yourself.
- Don't use the tub if you are or could possibly be pregnant.
- Limit tub use by children under 12, since their bodies cannot regulate the high temperature as well as an adult.
- At the top temperature, 104 degrees, you should not spend more than 15 minutes in the tub.
- There is a leaf skimmer available to remove any floating leaves or debris that blow in.
- Keep the tub covered when not in use.

***CHEMICALS AND TOOLS ARE STORED IN THE CLOSET
OF THE UPSTAIRS LEFT BEDROOM.***

Thanks for your help keeping the hot tub clear!
